Subject: From Figueres to Porto, via Stockholm

The InnoDC researchers have been out and about. Here are some of the places their research has taken them to over the last few months.

Stockholm:

[DTU](#) Denmark researcher [Anubhav Jain](#) published a paper summarising his findings on 'Control Solutions for Blackstart Capability and Islanding Operation of Offshore Wind Power Plants'. He took his [poster](#) to Stockholm to present at the international [Wind Integration Workshop](#).

Porto:

The researchers, supervisors and visiting scientists [met in Porto](#) for a week of workshops and talks - including presentations from [Toshiba](#), [R&D Nester](#), [Efacec](#) and [Vestas](#). Efacec and [Uporto](#) hosted the meeting, which coincided perfectly with the [BIN@Porto](#) conference, providing more workshops, talks and exhibitions. A professional camera-man filmed the researchers summarising their projects in just 1 minute each! Videos to follow...

Figueres:

In our last email we mentioned that we'd visited a school in Figueres as part of our [UPC Barcelona meeting](#). [CG Belgium](#) researcher [Stephen Hardy](#) brought along mini-turbines that he'd rustled up in his hotel room. The result: a fun, useful and memorable experiment. The pupils now know the difference between horizontal axis 'lift' based turbines and vertical axis 'drag' turbines. If you want to know too, read his [explanation](#).

We'll update you on the researchers' work in 2019.

InnoDC has received funding from the European Union's Horizon 2020 research and innovation programme under the Marie Skłodowska-Curie grant agreement No 765585.
